

The table below shows the current status of the micro-moths of Bedfordshire  
Last update Version 3 (1st August 2020)

The codes for the check fields for adult, mine and case are as follows:-

N = Check not needed unless unsure of id

Y= Retain specimen and check with recorder asap before release

P= Send photo to recorder to confirm id

G= Genitalia examination / dissection required for exact id of the species. This can be done by the recorders on request.

B= Breed through leafmine / larva / case / pupa to adult then treat adult using check code for adult

ANY species not previously recorded in the county has the status Y (Retain specimen and check with recorder asap before release)

Please also note that if you record a common species out of its normal flight period then photographic proof will be required
